AZIENDA E SERVIZIO

ESPERIENZA. QUALITÀ. FLESSIBILITÀ. PASSIONE

1992: la storia di Mistral inizia allora. Sono gli anni delle prime vetture dotate di filtro antipolline: per certi versi, siamo stati dei precursori.

Come Ditta Campi, realizziamo i filtri Mistral Air Ventilation Filter, ma la nostra esperienza si è forgiata anche intorno a prodotti destinati alle case automobilistiche ed ai marchi dell'Aftermarket più prestigiosi. Siamo degli specialisti.

Negli anni siamo cresciuti, ci siamo evoluti, ma sono rimasti quattro punti fermi: sviluppo; servizio; intercambiabilità con l'originale; e infine, qualità, la nostra "ossessione".

Da 32 anni, dunque, con entusiasmo, passione ed impegno, non smettiamo di innovare, di fare ricerca, di mettere a punto tecnologie originali sempre più performanti, come Soft Seal, Flexy Seal, Maniglia Smart. Flessibilità dei materiali, solida tenuta nell'alloggiamento, scrupolosa selezione dei materiali filtranti: tutto è progettato e rigorosamente testato per offrire prestazioni elevate, senza rinunciare a un prezzo accattivante.

La medesima attitudine, seria e meticolosa, si attua nel Servizio: rapidità di evasione degli ordini, altissimo livello di automazione di tutti i processi produttivi, versatilità, capacità di gestire anche piccoli quantitativi. Perché ogni azienda ha caratteristiche, abitudini ed esigenze specifiche, e va servita con una proposta flessibile e su misura. Il rapporto con i clienti, in Mistral, conta tanto quanto la qualità.

IN SINTESI – PUNTI DI FORZA:

- Dal 1992: esperienza, know-how, specializzazione
- Innovazione costante e tecnologie originali
- Prestazioni elevate e ottimo rapporto qualità-prezzo
- Produzione rigorosamente in Italia
- Processi produttivi certificati secondo la ISO 9001:2008
- Materiali certificati in Classe Alta Efficienza secondo UNI EN779, ISO16890
- Gamma sempre al passo con le novità del mercato automobilistico
- Versatilità e flessibilità: servizio su misura per il cliente
- E-commerce dedicato: ordina quando vuoi!
- Magazzino, logistica informatizzata, stock sempre aggiornati
- StartKit: la promozione verso i tuoi clienti non è mai stata così facile ed accattivante!
- QR Code: visiona i tutorial di sostituzione del filtro o l'immagine del suo alloggiamento

PRODOTTI: FILOSOFIA E TECNICA

QUANDO LE PERFORMANCE SONO UNA NECESSITÀ

Ogni automobile è come un'aspirapolvere: dal sistema di areazione, infatti, penetra l'aria esterna al veicolo, ricca di sostanze nocive. Il filtro abitacolo è l'unica barriera tra questa, e ciò che respiriamo all'interno della vettura.

Non è solo un fatto di inquinamento atmosferico: alle sostanze presenti nei gas di scarico, infatti, si uniscono le polveri generate dall'usura di pneumatici, freni e frizioni, polveri industriali, pollini o altri allergeni, terra e cattivi odori.

Tali polveri – pesanti, quindi presenti ad altezza suolo – vengono facilmente sollevate e rimesse in circolo dal vento, o dal passaggio dei veicoli stessi. La nostra autovettura preleva dunque l'aria inquinata dall'esterno, grazie ad una presa frontale posta a circa 80 cm da terra, e la immette nell'abitacolo.

Ecco perché la qualità dei filtri aria abitacolo è così importante: ricorrere a prodotti con elevate prestazioni, che rendano sano e sicuro l'interno del mezzo, è una necessità persino "logica ed inevitabile".

QUALITÀ CERTIFICATA

Le performance dello strumento dipendono da due principali fattori: la tenuta nell'alloggiamento del filtro, ed i materiali filtranti. Questi ultimi, più di tutti, definiscono il valore qualitativo del prodotto, la capacità

di trattenere efficacemente.

Con orgoglio, i filtri Mistral sono tutti realizzati con materiali certificati in Classe Alta Efficienza secondo

la normativa EN779, estremamente puntuale e restrittiva.

Non solo: test commissionati ad una azienda specializzata hanno rivelato che l'aria all'interno di due vetture (differenti per categoria, fascia di prezzo ed età) con installata la Serie Premium è superiore a quella consigliata per uffici ed abitazioni, un livello analogo a quello delle Camere Bianche; il certificato ottenuto dimostra il superamento del test della normativa ISO 14644-1/2/3: un orgoglio per noi, una garanzia per la salute dei nostri utenti.

Analizziamo nel dettaglio questa tipologia di prodotto, che si divide in due gamme: Particolare e Combinato con Carbone Attivo.

ZOOM: FILTRI A CARBONE ATTIVO – SERIE PREMIUM

Come un sandwich. I filtri a Carbone Attivo sono la combinazione di un super materiale filtrante, composto da quattro strati: un primo strato di materiale filtrante sintetico,

estremamente efficiente con i particolati; uno strato composto da micro e nanofibre (il Meltblown); uno di granuli di Carbone Attivo selezionato, ad elevata superficie (superiore ai 1000 mq/gr); infine, un tessuto di contenimento, anch'esso sintetico.

Grazie alle migliaia di gallerie che lo compongono, il Carbone Attivo si rivela uno straordinario materiale adsorbente. Questi filtri, pertanto, agiscono anche contro odori ed inquinanti gassosi.

Il principio di funzionamento può essere di due tipi:

- Fisico: l'inquinante passa attraverso i "cunicoli" e si deposita
- Chimico: il flusso d'aria lambisce la superficie del carbone e, grazie alle forze di Van Der Waals, deposita le molecole in sospensione, creando legami molecolari.

In questa tipologia di filtro, il materiale di riferimento è il Carbone Attivo in granuli di tipo vegetale (si ricava dai gusci delle noci di cocco): ideale per porosità e dimensione dei fori, è il più indicato per la filtrazione degli aeriformi.

La proposta di Mistral per questa categoria è la Serie Premium, che – grazie ai materiali accuratamente selezionati, alla struttura, ed alle nostre tecnologie esclusive (Flexy Seal, Soft Seal, Maniglia Smart) – è garanzia di performance straordinarie, anche dopo un utilizzo "lungo" migliaia di chilometri.

Un test realizzato in condizioni ambientali normali lo ha inequivocabilmente dimostrato: un contatore di particelle certificato, inserito in un tunnel di prova,

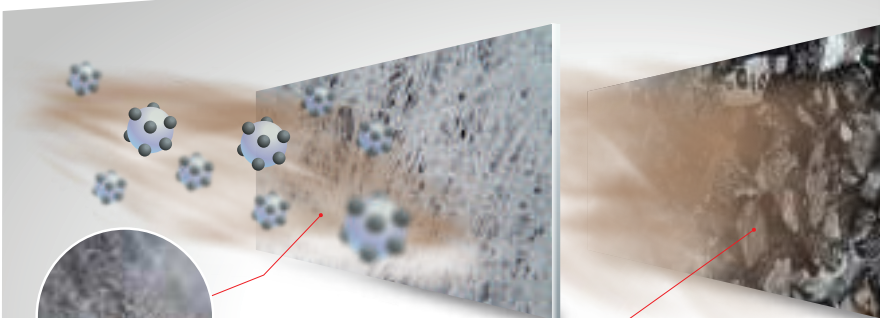

ha indicato come, rispetto ad un filtro di alto livello di un competitor, le performance siano sensibilmente migliori, specialmente verso le particelle inferiori al micron. In particolare, la Serie Premium trattiene oltre il 50% delle polveri di 0.3 micron, le più nocive! Un'ulteriore indagine – commissionata ad una azienda certificata, su due vetture che hanno percorso 15.000 km – ha offerto risultati lusinghieri anche nella capacità di trattenere i batteri: tra lato di entrata e lato di uscita del filtro, la Serie Premium riduce le cariche batteriche di oltre il 90-95%.

Qualità che – con una visione "etica" – applichiamo a tutti i nostri prodotti, rendendo così l'eccellenza uno standard. In Mistral, dunque, ogni filtro è "top di gamma": perché prenderci cura della salute dei nostri clienti, è il nostro unico obiettivo.

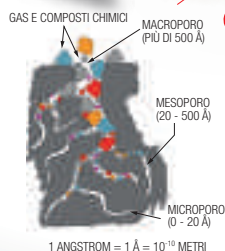

Serie Premium: l'Eccellenza ha un nuovo standard.

Scan Me

1 Il materiale – accuratamente selezionato, e testato in Classe Alta Efficienza secondo la normativa UNI EN779 – trattiene le polveri più sottili.

2 Grazie ai quattro strati, ed alla grande quantità di Carbone Attivo (peso abituale 550 gr/mq), odori ed inquinanti gassosi vengono drasticamente ridotti.

Composizione interna combinato con carbone.

Composizione interna del filtro combinato con carbone attivo.

3 Solo aria salubre all'interno dell'abitacolo, per te e per i tuoi passeggeri.
#Respira la differenza.

Scan Me

ZOOM: FILTRI PARTICELLARI O ANTIPOLLINI – SERIE EVOLUTION

Un “intreccio” di fibre di poliestere, un tessuto non tessuto (TNT) assolutamente stabile con l’acqua: ecco di cosa è composto il materiale particellare. Essendo sintetico, non offre terreno fertile per ceppi batterici e muffe, nè soffre le variazioni termiche, l’umidità, gli agenti atmosferici o prodotti chimici che possano penetrare nel sistema di ventilazione. I Filtri Particellari, in definitiva, trattengono con efficacia pollini, polveri, sabbia, inquinanti pericolosi e particolati sottili (PM10, PM5, PM2,5, PM1).

Per quanto i Filtri a Carbone Attivo costituiscano la variante più incisiva nell’ambito della filtrazione, i Filtri Particellari restano molto diffusi e meritevoli, quindi, di ulteriore dedizione. La proposta di Mistral per questa categoria è la Serie Evolution, frutto dell’ossessione per la Qualità (che fa rima con “Salute”), e della costante propensione verso la ricerca.

A un sottile strato di tessuto filtrante (con funzione di supporto, e che riduce l’impatto ambientale), vengono saldate le fibre Meltblown, ed i risultati sono sbalorditivi: prestazioni 10 volte superiori rispetto alle (già lusinghiere) precedenti, ed efficienza nei confronti delle particelle da 0,3 micron del 30%, che si allinea a quel 50% della Serie Premium.

All’aumento della Qualità, abbiamo tuttavia deciso di non far seguire un aumento del costo: al medesimo, accattivante prezzo di sempre, quindi, la Serie Evolution garantisce un sensibile incremento sul

piano delle prestazioni, configurandosi come un prodotto realmente soddisfacente e competitivo.

Serie Evolution: il nuovo riferimento per i Filtri Particellari.

Scan Me

FLESSIBILITÀ, MATERIALI E STRUTTURA: IDEALE SINERGIA

Per quanto efficaci possano essere i materiali filtranti e la struttura di un filtro, se questo non aderisce perfettamente nell’alloggiamento, l’aria passa ugualmente, ed il lavoro di filtrazione risulta vanificato.

Proprio per questo, in Mistral prestiamo particolare attenzione nel confezionamento dei bordi e nella flessibilità.

Flexy Seal e Soft Seal – due tecnologie di nostra ideazione, risultato di svariati test – complessivamente agiscono sulla tenuta del filtro, oltre a rendere facile e rapida l’installazione. La flessibilità dei prodotti Mistral fa sì che, una volta inseriti e rilasciati all’interno dell’alloggiamento, essi aderiscano perfettamente ai contorni.

La Maniglia Smart, invece, rende veloce ed immediata la rimozione del filtro, anche quando l’alloggiamento è collocato in spazi angusti.

Tutte innovazioni introdotte per agevolare i meccanici, e semplificare il lavoro quotidiano in officina.

COMPANY AND SERVICE

EXPERIENCE. QUALITY. FLEXIBILITY. PASSION.

1992: Mistral's history started then. Those were the years of the first cars equipped with anti-pollen filters: in some ways, we have been pioneers.

As Campi company we produce Mistral Air Ventilation Filters, but our experience also includes products addressed to car manufacturers and the most prestigious Aftermarket brands. We are specialists.

Over the years, we have grown, evolved, but four staples remain: development, service, interchangeability with the original, and quality – our “obsession”.

We have kept innovating for 32 years, conducting research, developing more and more efficient original technologies, like Soft Seal, Flexy Seal, and Smart Handle. Materials flexibility, solid holding in the slots, scrupulous selection of filtering materials: everything is designed and rigorously tested to offer the highest performances without sacrificing an attractive price.

The same serious and meticulous attitude applies to Service: fast order processing, high level of automation of all production processes, versatility, ability to manage also small quantities. Every company has its own characteristics, habits, and specific necessities, so we offer a flexible and tailor-made proposal. At Mistral, the relation with clients is as important as quality.

IN SUMMARY – OUR STRENGTHS:

- Since 1992: experience, know-how, specialization
- Constant innovation and original technologies
- High performance and excellent value for money
- Production rigorously in Italy
- Production processes certified according to ISO 9001:2008
- Materials certified as High Efficiency Class according to UNI EN779, ISO16890
- Range always in line with innovations in the Automotive Market
- Versatility and flexibility: service tailored for the client
- Dedicated e-commerce: order when you wish!
- Warehouse, computerized logistic, stocks always up to date
- StartKit: promotion towards your clients has never been so easy and attractive!
- QR Code: view the filter replacement tutorial or the picture of its slot.

PRODUCTS

PHILOSOPHY AND TECHNIQUES

WHEN PERFORMANCE IS A NECESSITY

Every vehicle is like a vacuum cleaner: the air outside, rich in harmful substances, penetrates the ventilation system. The cabin filter is the only barrier between the outside air and the air we breathe inside.

It is not only a matter of air pollution: apart from the substances in the exhaust gas, there is also dust generated from the usage of tires, brakes and clutch, industrial dust, pollen or other allergens, dirt, and smells.

These types of dust – heavy, therefore present at ground level – are easily raised and spread by the wind or passing vehicles. So, our car collects polluted air from outside via a frontal air intake located at around 80 cm from the ground, and releases it into the cabin.

This is why the quality of the cabin filter is of utmost importance: it is no less than a “logic and inevitable” necessity, to use high-performance products that make the inside of the vehicle safe and healthy.

CERTIFIED QUALITY

The tool's performance depends on two main factors: the filter's endurance in the slot, and the filtering materials. The latter defines the qualitative value of the product most of all, determining the ability to retain particles efficiently.

All Mistral filters are proudly made with materials certified High Efficiency Class according to EN779 legislation, a very strict and accurate law.

Not only that: tests commissioned to a specialized company have revealed that the air quality detected inside two vehicles (of different categories, price ranges and ages), with the Premium Series installed, is superior to that suggested for offices and dwellings. It matches the Clean Rooms' standard; the consequent certification shows the passing of the tests of the norm ISO 14644-1/2/3, which is a reason of pride for us, and guarantee for our clients' health.

Let's analyze in detail this type of product, that is divided into two ranges: Particle Filters and Combined with Activated Carbon.

ZOOM: ACTIVATED CARBON FILTERS – PREMIUM SERIES

The Activated Carbon Filters are like a sandwich. They combine a super filtering material made of four layers: a first layer made of synthetic filtering material, extremely efficient with

particulate; a layer made of micro and nanofibers (the Meltblown); one of selected Activated Carbon grains, with a high surface area (more than 1000 m²/gr); finally, a containment textile, synthetic as well.

Thanks to the thousands of galleries that it is made of, Activated Carbon is proven an extraordinary absorbing material. Moreover, these filters act against smells and gaseous pollutants.

The principles of functioning can be of two types:

- Physical: the pollutant passes through the “tunnels” and settles there
- Chemical: the air flow runs past the carbon’s surface and, thanks to the Van Der Waals forces, it deposits the molecules in suspension, creating molecular bonds.

In this type of filter, the material of reference is Activated Carbon in grains of vegetable origin (obtained from coconut shells): ideal for its porosity and holes dimension, it is the most indicated for air filtration.

Mistral’s proposal for this category is the Premium Series, which – thanks to carefully selected materials, structure and our exclusive technologies (Flexy Seal, Soft Seal, Smart Handle) – is a guarantee of extraordinary performances even after a “kilometers long” usage.

A test run in normal environmental conditions has shown this unequivocally: a certified particles counter, inserted in a trial tunnel, has indicated

that, compared to competitor’s quality filters, the performance is substantially better, especially regarding particles smaller than a micron. In particular, the Premium Series retains more than 50% of 0.3 micron particles, the most dangerous ones!

A further study on two vehicles that have covered 15,000 km, commissioned to a certified company, has offered excellent results in retaining bacteria: between the inlet and outlet side of the filter, the Premium Series reduces bacterial loads by over 90-95%.

We apply quality to all our products with an “ethical” vision, making excellence a standard. At Mistral, every filter is top of the line: caring about our clients’ health is our sole objective.

Premium Series: Excellence has a new standard.

Scan Me

1 The materials – carefully selected and tested as High Efficiency Class according to EN779 legislation – retain the finest dust particles.

2 Thanks to its four layers and the high quantity of Active Carbon (average weight of 550gr/m²), smells and pollutant gases are drastically reduced.

3 Only healthy air within the vehicle, for you and your passengers!

GAS AND CHEMICAL COMPOUND
MACROPORES (MORE THAN 500 Å)
MESOPORES (20 - 500 Å)
MICROPORES (0 - 20 Å)
1 ANGSTROM = 1 Å = 10⁻¹⁰ METERS

Active carbon grains.

ZOOM: PARTICLE FILTERS OR ANTI-POLLEN – EVOLUTION SERIES

A “twist” of polyester fibers, a textile non-textile (TNT), stable with water: this is what the particle material is made of. Since it is synthetic, it does not offer fertile ground to bacterial strains and molds, nor does it suffer the changes in temperature, humidity, atmospheric agents or chemical products that can penetrate in the ventilation system.

Ultimately, these filters efficiently retain pollen, dust, sand, dangerous pollutants and fine particulates (PM10, PM5, PM2.5, PM1).

While Activated Carbon Filters constitute the most incisive variant in filtration, the Particulate Filters remain very popular and worthy of further insight. Mistral’s proposal for this category is the Evolution Series, the result of an obsession for Quality (paired with “Health”) and of a constant drive towards research.

The Meltblown fibers are sealed to a thin layer of filtering fabric (with a support function, that reduces environmental impact as well) and the results are astounding: 10 times higher performance than the (already incredible) previous one, with efficiency of 30% against 0.3 micron particles, which aligns with the 50% one of the Premium Series.

Despite the increase in Quality, we have decided not to increase our prices: the Evolution Series guarantees a significant improvement in performance

as a truly satisfying and competitive product, at the same attractive price as always.

Evolution Series: the new reference for Particle Filters.

FLEXIBILITY, MATERIALS AND STRUCTURE: AN IDEAL SYNERGY

As efficient as the filtering materials and their structure can be, if the filter does not perfectly adhere to the slot, the air will pass through anyway, and the filtering work is vanished.

For this precise reason, at Mistral we pay particular attention to border manufacture and flexibility.

Flexy Seal and Soft Seal – two technologies we have invented and developed through many tests – act on endurance of the filter, and facilitate the placement. The flexibility of Mistral products makes sure that, once installed in the slot, they perfectly adhere to the borders.

Moreover, the Smart Handle makes removing the filter fast and immediate, even when the slot is located in narrow spaces.

All these innovations have been introduced to help and facilitate the mechanics’ day-to-day job at the garage.
